Introducing the Green Skills Academy

The Growth Company's Education and Skills team opened the Green Skills Academy in early 2023. The centre, in Trafford Park, is the first of its kind in the North of England. It will play a critical role in helping the UK achieve net zero carbon targets.

The Academy will house industry-standard green technologies for businesses and individuals to gain the knowledge and skills needed to install and maintain them.

Whether you are a business looking to future-proof your workforce or you're looking to support your future career, the Green Skills Academy is your one-stop campus to support your ambitions.

The Workshop

The Green Skills Academy, the hub for emerging technologies, will welcome apprentices, engineers and businesses to collaborate together.

- Dedicated work booths housing green technologies
- Low energy smart home with the latest in-home energy saving technologies
- EV charging points
- On-site meeting and training facilities include two classrooms, a boardroom, and a conference room
- Student breakout zone providing an informal space for learners to collaborate

Our programmes:

We deliver a range of skills programmes to support existing employees and those new to the world of work to gain the knowledge required to install and maintain green technologies.

For Business:

Ensuring your business is prepared for the challenges and opportunities green technologies will bring will be essential for future growth. We have a range of short courses and apprenticeships to equip your team with the skills they will need.

For people:

Maintaining your skills and knowledge in emerging technologies will enhance your career prospects and provide you with valuable information about your own home and the way you live.

Apprenticeships:

Our specialist Apprenticeship programmes are designed to meet the future skills needs of businesses by blending on-the-job experience with valuable, industry recognised qualifications. Speak to one of our team to find out more about apprenticeships available and all funding opportunities available to you.

Electric and Hybrid Vehicle Maintenance and Repair*

Dual Fuel Smart Meter Installation

18th Edition Course**

Wind Turbine Installation

Electric Vehicle Charging Point Installation

Installation of Small Scale Solar Photovoltaic Thermal/ PVT's

Smart Home Programming System

External Wall Insulation

Cavity Wall Insulation Extraction

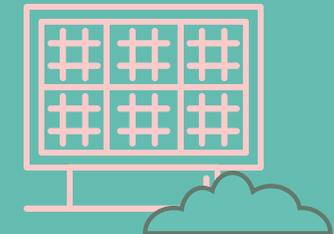

Demonstration 'Low Energy Smart Home' on site

Inspection & Testing

* Delivered at our Greater Manchester SkillCentre, Trafford Park.

** (essential for all electricians working in the UK - highly recommended to ensure that all installers have a thorough understanding of the new regulations)

Our Journey to Net Zero

The Growth Company is an award-winning provider of environmental services designed to accelerate the net zero ambition.

Through our services and dedicated commitment to our partners ambitions we have:

**2m
Tonnes**

Of carbon saved from being produced

£500m

Saved in energy, material and waste costs

Our Business Services

Green Economy:

Whether you're looking for a reputable installer or service provider, or you supply or install low carbon technologies, our experts help to match these together through our Marketplace directory.

Journey to Net Zero:

Designed to help senior decision makers in business to develop a clear plan of action to achieve net zero ambitions.

Energy Innovation Agency:

Working across eight regional and national partners, the Energy Innovation Agency enables businesses with low carbon solutions to get their products or services to market through specialist support including funding and collaboration, industry steering and business development.

Centre for Assessment (CFA):

Delivering the ISO 14001 Environmental Management System accreditation and PAS 2060 Carbon Neutrality, these help companies validate themselves as they reduce their carbon footprint. The CFA is also a Global Wind Organisation approved certification body.
